

Fluorinated Gas Verification

Fluorinated Gas Verification

Fluorinated greenhouse gases (F-gases), significant contributors to climate change, fall under EU and GB regulatory frameworks. Entities dealing with F-gases from production to importing and placing on market are required to **report** their activities.

As an **independent verifier**, Normec Verifavia, plays a crucial role in the verification process, conducting audits to ensure data alignment with both the EU and GB regulations. This verification ensures compliance and upholds transparency and environmental integrity in managing F-gases.

F-Gas Verification and Reporting Overview

- **Verification Approach:** Sampling ensures F-gas data accuracy.
- **F-Gas Report:** Confirms F-gas quantities for regulatory submission.
- **EU Regulations:** EU 517/2014 & 2024/573 set stricter deadlines and rules.
- **UK Regulations:** UK mirrors EU rules post-Brexit for F-gases.

Why Choose Normec Verifavia?

- **Independence:** Ensures impartiality for credible data.
- **Expertise:** Skilled verification team with F-gas and ISO 17029 expertise.
- **Transparency:** Clear communication throughout audit.
- **Regulatory Compliance:** Adheres to UK and EU F-gas regulations.
- **Environmental Stewardship:** Supports climate change efforts with accurate reporting.

Process

1

Pre-Engagement

Client information collection & engagement decision

2

Engagement

Contract definition of scope, objectives & responsibilities

3

Planning

Verification plan development & team selection

4

Execution

Data verification & regulatory compliance assessment

5

Review

Independent technical review of findings

6

Reporting

Issuance of verification statement

7

Post-Opinion Facts

Assessment of new information impacting the opinion

8

Records

Documentation retention for 10 years
