

Clean Shipping Index (CSI) Verification

Clean Shipping Index (CSI) Verification

Cargo owners are increasingly seeking shipping partners that are environmentally responsible. The global shipping industry contributes significantly to greenhouse gas emissions, which has prompted calls for action. The Clean Shipping Index (CSI) is a **voluntary initiative** that empowers informed choices by ranking ships based on verified data on their emissions and efficiency. Normec Verifavia provides independent verification, which is crucial for ensuring accuracy and transparency in the maritime industry, fostering trust among stakeholders.

Powering Clean Shipping Credentials

Independent CSI verification enables shipowners to qualify for tax rebates at ports including Sweden, Vancouver, Gothenburg, Prince Rupert, Petroport, and Gävle. The process **assesses a ship's environmental performance, covering emissions to air and water, energy efficiency, and use of cleaner technologies.** Recognised under the latest CSI standard, this verification supports access to financial incentives, enhances sustainability credentials, and contributes to global emission reduction efforts.

Why Choose Normec Verifavia?

- First verifier accredited under the new CSI standard.
- Proven track record with leading global shipping companies.
- Accurate, independent, and reliable verification.
- Enables access to port tax rebates and sustainability incentives.
- Supports environmental leadership and compliance credibility.

Process

1

Data Submission & Agreement

Shipowners submit data and agree to terms

2

Verifier Selection & Access

Verifier is chosen and given data access

3

Comprehensive Audit

Covers contract, office, and vessel checks

4

Certification

CSI certifies verified data

Get CSI Verified, Unlock Port Benefits
Trusted verification for cleaner, compliant shipping.
