

EPL Installation Management

EPL Installation Management

With the enforcement of the IMO's EEXI regulation, shipowners must adopt technical solutions like Engine Power Limitation (EPL) or Shaft Power Limitation (ShaPoLi) systems to meet compliance requirements. These systems help reduce a vessel's carbon footprint by capping engine power output, while still allowing override in emergencies. Selecting the right solution, mechanical or electronic and ensuring it's properly installed and documented is crucial to avoid delays, survey issues, and unnecessary operational limitations. This is where expert guidance and end-to-end support become vital.

End-to-End EPL/ShaPoLi Installation Support

This service offers complete support for the selection, supply, and installation of EPL or ShaPoLi systems tailored to your vessel's needs. Whether opting for the simplicity of Mechanical EPL or the advanced functionality of ShaPoLi, the process is managed end-to-end, including procurement, installation, documentation, and crew training, to ensure smooth, survey-ready EEXI compliance with minimal disruption.

Why Choose Normec Verifavia?

- **Expert Knowledge:** Specialists in EEXI compliance with hands-on experience in EPL and ShaPoLi systems.
- **End-to-End Service:** From system selection to installation and training, everything handled for you.
- **Trusted Experience:** Proven track record with global shipowners and strong ties to top equipment suppliers.

Process

1

EPL/ShaPoLi Selection
Choose the right system based on your needs

2

Procurement and Planning
System sourced and installation planned

3

Installation and Commissioning
Installed and tested by expert engineers

4

Crew Training and Support
Crew trained for safe use, with continued support

Get EPL/ShaPoLi Installed with Confidence!

Seamless selection, installation, and compliance support, tailored to your vessel.
