

Poseidon Principles

Poseidon Principles

Poseidon Principles is a framework for **Banks/Financial institutions** to use their influence as a major capital provider to the shipping industry to support the objective of IMO GHG (Green House Gases) reduction by 50% by 2050.

Normec Verifavia offers trusted expertise in data collection, alignment calculations, and independent verification, empowering you to confidently navigate these principles and contribute to a greener maritime future.

Climate Alignment & Reporting

The Poseidon Principles offer a **voluntary framework** for financial institutions to assess and disclose the climate alignment of shipping portfolios. Applicable to credit products secured by vessels over 5,000 GT under the IMO DCS, the process requires **verified emissions data and climate alignment calculations**. With shipowner consent, this data, along with the Statement of Compliance, can be collected and assessed internally or by a nominated third party. Signatories must submit their alignment scores by November 30 and publish them annually to promote transparency and decarbonization progress.

Why Choose Normec Verifavia?

- Trusted verification partner with global flag accreditations.
- Experts in IMO DCS data and climate alignment calculations.
- Scalable solutions for accurate, portfolio-level reporting.

Process

1

Assess vessel performance

Calculate AER using verified IMO DCS data

2

Compare to trajectory

Match AER against decarbonization targets

3

Evaluate portfolio (optional)

Calculate fleet-wide climate alignment

4

Enhance transparency

Submit and share annual alignment reports

Stay Aligned with the Poseidon Principles Today!
