

Sea Cargo Charter

The Sea Cargo Charter supports shipowners, charterers, and operators measure and disclose carbon intensity in line with IMO decarbonization goals. Normec Verifavia ensures accurate emissions tracking, reporting, and strategic insights to support sustainability targets. Our independent verification simplifies compliance with climate-aligned chartering principles, giving stakeholders a competitive edge in sustainable shipping. Strengthen ESG commitments, enhance transparency, and build trust with reliable, future-proof reporting solutions.

Verified Data for Smarter Chartering

The Sea Cargo Charter enables data-driven decision-making by providing a clear framework to benchmark emissions performance across voyages and fleets. It empowers stakeholders to **evaluate chartering strategies, optimise vessel selection, and identify carbon hotspots in their operations.** With standardised reporting and third-party verification, the Charter ensures comparability and integrity of climate alignment scores, positioning companies to meet investor expectations, regulatory pressures, and evolving sustainability standards in the global maritime supply chain.

Why Choose Normec Verifavia?

- **World's Leading Verification Body:** Trusted for emissions verification under global regulations.
- **Extensive Maritime Experience:** Skilled in accurate maritime data assessment.
- **Independent Third-Party Expertise:** Unbiased and reliable compliance reporting.

Process

1

Data Collection

Collect fuel, emissions, and cargo data as per IMO or EU MRV

2

Climate Alignment Calculation

Use approved methods or third-party calculations

3

Annual Reporting

Submit alignment scores to the Charter Secretariat annually

4

Result Publication

Publish scores in reports to ensure transparency
